

Keeping Active During Revision

Information For Parents and Carers

Did you know?

Research shows that physically active students have more active brains. Even walking for just 20 minutes can significantly increase activity in the brain. This means that it is really important for students to take regular breaks in their learning.

Exercise triggers the release of various hormones and chemical compounds in the body and has many benefits to learning:

It improves cognitive brain function

It improves students' ability to focus for longer periods of time

It can reduce stress levels

It can improve memory retention

Studies have shown that exercise helps to oxygenate the brain and **release tension**, helping students to **keep calm, mentally relax** and **study more efficiently**. Productive people often work smarter rather than harder and exercise has a huge part to play in this.

What can you do?

Support your child to take regular breaks so they are less likely to get distracted whilst revising. It's much better to spend 60 minutes revising well and **10 minutes on a break** than for your child to spend longer half revising and half playing with their phone! Suggest to your child that they take breaks every 60-90 minutes when revising.

Encourage your child to do something active with their break, such as getting some fresh air, playing sport, going for a walk or a run, or doing housework. Remind them that exercise doesn't have to last for hours to count.

Work with your child to help them work efficiently and find a routine that works for them. They need to be flexible to work around their timetables and could do some exercise early in the morning, at lunchtimes or early evenings. Alongside exercising help your child to take care of themselves by eating well, sleeping well, relaxing, socialising and having some down time.
